KEYUR KAKLOTAR

ARCHITECT | FOUNDER – KK ARCHITECT

CA/2019/115819

ABOUT ME

An Architect with 8+ years of experience in residential architecture, interior design, and turnkey project execution. Experienced in design development, working drawings, client meetings, site coordination, and project execution. Committed to delivering quality projects with innovative and practical design solutions.

CAREER HIGHLIGHTS

125+	50+	8+	3	100+
PROJECTS COMPLETED	TURNKEY PROJECTS	YEARS OF EXPERIENCE	CITIES SERVED	SATISFIED CLIENTS

CORE COMPETENCIES

- Architectural Design
- Design Management
- Project Leadership
- Team Management
- Site Execution & Coordination
- Client Management
- BOQ & Costing
- Sustainable & Smart Design
- Interior Design
- Vendor & Consultant Coordination
- Quality Control
- Project Scheduling & Value Engineering

PROFESSIONAL EXPERIENCE

2016 – 2018
(Internship & Job)

ISHWAR GEHI ARCHITECT, SURAT

Architect (Junior Architect)

- Worked on a variety of architectural projects including resort, villa society and community development projects.
- Involved in concept development, planning, design development and working drawings.
- Prepared architectural drawings, 3D models, presentations and detail drawings.
- Coordinated with consultants, clients and site team for smooth execution.
- Visited sites for inspections and ensured quality and timelines.

MAY 2019 – APR 2020
(6 Months)

KARMASTU ARCHITECT, SURAT

Architect

- Worked on various architectural and interior projects including residential, commercial and hospitality projects.
- Prepared working drawings, 3D views and execution details.
- Coordinated with consultants, vendors and site team.
- Gained practical knowledge of materials, execution techniques and site management.

2020 – PRESENT

FOUNDER & PRINCIPAL ARCHITECT

KK ARCHITECT

- Established KK Architect in 2020.
- Successfully completed 125+ architecture and interior projects.
- Delivered more than 50+ turnkey projects from concept to handover.
- Specialized in villas, weekend homes, farmhouses, residential interiors and hospital projects.
- Managed complete project lifecycle including design, approvals, working drawings, budgeting, execution and final handover.
- Lead consultants, contractors, vendors and project teams across multiple sites.

PROJECTS WORKED ON

- **Arya Club & Resort** – Rajkot
- **Arya Family Club** – Surat
- **IGA Studio**
- **Agora City** – Vadodara
- **Vida 360** – Surat

KEY ACHIEVEMENTS

125+
Projects Completed across diverse typologies

50+
Turnkey Projects successfully delivered

On-time Delivery with highest quality standards

Strong client relationships and repeat projects

Creative, functional and sustainable design approach

EXPERTISE AREAS

Luxury Villas	Weekend Homes	Farm Houses
Residential Interiors	Hospital Projects	Commercial Spaces
Renovation Projects	Site Coordination	Consultant Management

125+ Projects Completed

50+ Turnkey Projects

Surat • Ahmedabad • Mumbai Projects Across Major Cities

8+ Years of Experience

100+ Satisfied Clients

COA Registered Architect

PROJECT DESCRIPTION

VRINDAVAN

SUSTAINABLE BUNGALOW

LOCATION
Adajan, Surat

AREA
230 Vaar

STATUS
Ongoing

ROLE
Architecture | Interior

PROJECT OVERVIEW

This bungalow design is not just modern in style but also rooted in sustainability and natural harmony. The white-and-light façade with perforated jaali screens allows soft daylight to filter deep into the spaces while cutting out harsh glare. This reduces artificial lighting needs during the day and keeps the interiors naturally cool.

The curved balconies and extended terrace slab act as shading devices, creating natural shadows that protect the glass areas from direct heat gain. As the sun moves, these curves cast dynamic shadows across the façade, keeping spaces comfortable while giving the home a living, breathing character.

Integrated planters, green walls, and creepers act as thermal buffers, improving air quality and reducing the urban heat effect. The garden with Champa and palms not only adds beauty but also enhances microclimate around the house.

The roof slab is designed to support solar panels, allowing the house to generate renewable energy. **Rainwater can be** harvested through concealed downpipes, and the landscape allows percolation to recharge groundwater.

SUSTAINABLE DESIGN FEATURES

01 Jaali Screen as Solar Shield
Perforated jaali blocks direct west sun rays, allowing diffused daylight and cutting 75–80% glare & heat.

02 Curved Balconies & Overhangs
Deep overhangs act as shading devices, blocking high-angle summer sun while allowing winter gain by ~30%.

03 Light-Colored Façade
White & light grey surfaces reflect heat (high albedo), reducing wall surface temperature by 8–10°C.

04 Green Buffering
Vertical planters & creepers act as a living green screen, adding thermal insulation & reducing indoor temperature by 2–3°C.

05 Landscape Cooling
Champa & palm trees provide shade & airflow. Dense landscaping creates evapotranspiration effect, lowering surrounding temperature.

06 Daylight Efficiency
Large glazed openings & shaded west openings ensure 6–7 hrs of usable daylight without glare. Cuts lighting usage by 40–50%.

07 Solar Integration
Terrace slab sized for rooftop solar panels, capable of meeting 60–70% of household energy needs.

08 Rainwater Harvesting & Recharge
Sloped landscape directs rainwater to recharge pits. Potential to collect 40,000–50,000 liters/year.

KEY SUSTAINABILITY BENEFITS

Natural Cooling
Reduces indoor temperature by 2–3°C

Energy Efficiency
Saves up to 40–50% energy on lighting

Renewable Energy
Up to 60–70% of energy from solar power

Water Conservation
Harvests 40,000–50,000 liters of rainwater annually

Better Environment
Improved air quality & reduced urban heat effect

> "A home that lives in harmony with nature, saves energy, and secures the future."
